

GPT Training Experiment

Generated at 2026-02-05 23:34 UTC

Executive Summary

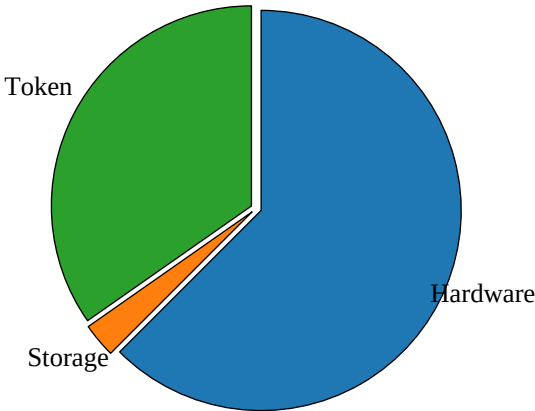

This report provides a comprehensive analysis of the training cost structure. The total training cost is **576.0 USD**. The baseline training cost is primarily driven by hardware expenses. The most cost-efficient scenario is 'Bigger Dataset', while 'Bigger Dataset' represents the highest total cost.

Training Cost Breakdown

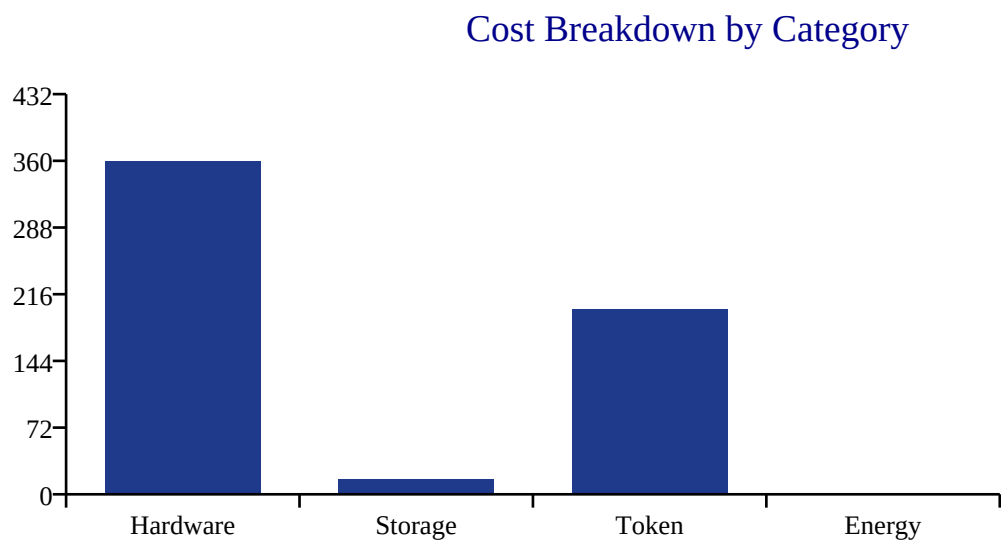

Category	Cost (USD)
Hardware Cost	360.0 USD
Storage Cost	16.0 USD
Token Cost	200.0 USD
Energy Cost	0.0 USD (renewable)
TOTAL COST	576.0 USD

Cost Distribution Overview

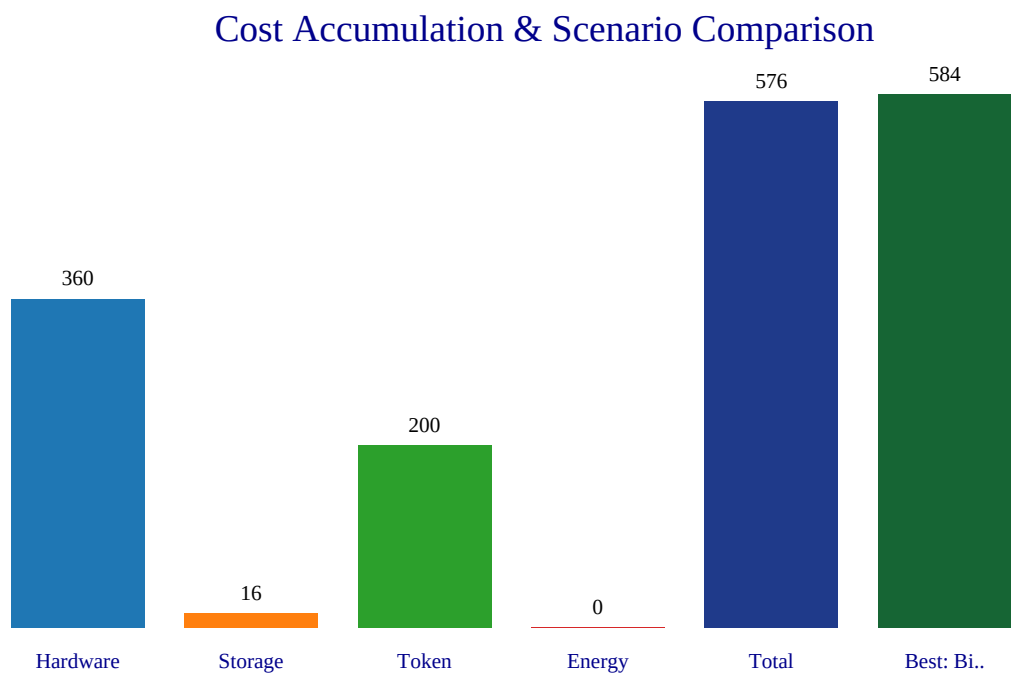

Cost Distribution

Cost Breakdown by Category

Cost Accumulation & Scenario Comparison

Scenario Cost Comparison

Scenario		Total Cost (USD)	Comparison to Baseline
Bigger Dataset	Bigger Dataset increases total cost by 1.49% compared to baseline.	584.0149	

Scenario Insights

- Bigger Dataset increases total cost by 1.4% compared to baseline.

Notes

- Energy costs are provided externally and may vary by region.
- Scenario calculations are derived from the same base training configuration.
